Cameco reported 2Q26 results on last Friday. The stock was surprisingly mixed and volatile given what we perceived as positive commentary on the market backdrop combined with Westinghouse disclosure. While our next year model changed modestly (and thus our target price remains unchanged), our long term model increased in value and clarity particularly around Westinghouse.

While a potential Westinghouse IPO was a credible possibility last year (highlighted in the landmark strategic partnership between Westinghouse and the US government), details were scarce and timelines extended. With the filing of a confidential S-1, the **IPO timeline has accelerated.**

In parallel with the S-1 filing newsflow, **Cameco expanded its disclosure** around Westinghouse as a business in its Management Disclosure & Analysis. No doubt such details were readily available as they have been gathered during the preparation process of the S-1 filing.

Management now sees Westinghouse (with an existing reactor design that has been built and delivered) **capturing roughly one-third of global new-build market share** through 2040, supported by a pipeline of around ~90 reactor units, with most CODs clustered in the late 2030s.

For nth-of-a-kind AP1000 deployments, we assume a global overnight cost of \$7-8.5 bln/unit and \$6-8 bln per unit in the U.S., implying about \$6,100–\$7,400/kw of overnight cost (versus roughly \$2,300–\$2,600/kw for comparable builds in China so perhaps conservative numbers from Cameco). The **encouraging development is timing:** management targets a 5–6 year build cycle from first nuclear concrete to COD, with potential to compress toward ~4 years over time, approaching the construction timelines achieved in China and far better than Vogtle Units 3 and 4, which took roughly 12 years from FNC (First Nuclear Concrete) to commercial operation.

With uranium between priced in the long term market at close to \$100/lb (**the highest levels in more than a decade**) amidst undercontracting and demand surprises from uncontracted restarts, we see a positive price backdrop as well.

INVESTMENT IMPLICATIONS

We rate Cameco Outperform and value at \$135/sh using a 23x EV/EBITDA multiple on its 2030E EBITDA of CAD\$ 3.2 bln and incorporating additional returns to shareholders. We roll the valuation year forward to 2030E EBITDA to better capture the expected inflection in earnings power and Cameco's long term exposure to uranium price. We updated full-year realized prices, cash costs, and other key assumptions, and incorporated the latest Westinghouse economics while keeping the reactor build timeline unchanged. CCO's share price moved modestly due to FX.

DETAILS

JOURNEY TO THE WEST(INGHOUSE)

We have more clarity about Westinghouse, with the IPO deal outlined - [AE&T: Westinghouse/Cameco - \\$80bln Nuclear Rebirth in the US](#)

Market Share: We believe Westinghouse AP1000 will be the standard in US ,and it will achieve its Noak in US post 2035.

Westinghouse's OPS business is already 63% of the ~417 installed and operating reactors globally and its fueling services is ~40% of those fleet.

The company targets to capture ~1/3 of the nuclear new build (excl. China, Russia and SMRs) through 2040.

In our detailed DCF, Westinghouse accounts for roughly 50% of the value in both our base and bull cases, and even under conservative base case assumptions we still see upside relative to the current share price.

SMR

We appreciate that CCJ is finally providing greater clarity, arguably for the first time, around AP300. We like that AP300 shares roughly 80% of its supply chain, technology and licensing basis with the AP1000, which should streamline deployment and lower execution risk.

However, we are still struck by the fact that AP300's **NoaK cost remains almost twice that of an AP1000 on a per kilowatt basis**, a conclusion that reinforces our view that SMRs are unlikely to become the dominant or default solution for meeting surging power demand.

VALUATION METHODOLOGY**Cameco Corp**

We rate Cameco Outperform and value Cameco at \$135/sh (CAD \$189/sh) using a 23x EV/EBITDA multiple on its 2030E EBITDA of CAD\$3.2bln.

RISKS**Cameco Corp**

Downside risks to our price target include:

1. Nuclear safety - related risks

Nuclear power safety concerns, often due to reactor mismanagement, can cause delays in permits and construction. This slowdown in the nuclear energy sector adoption directly reduces the demand for Cameco's uranium, hitting its sales and revenue. Public fear and regulatory tightening can further dampen the market.

2. High labor costs

Cameco faces high costs for skilled labor in the nuclear industry. The limited supply of specialized workers drives up wages, squeezing profit margins. Labor - market fluctuations like shortages or strikes can disrupt production and increase expenses.

3. The rise of plutonium & thorium use could reduce demand for uranium

The growing use of plutonium and thorium in Fast Breeder Reactor (FBRs) and Molten Salt Reactor (MSR) threatens Cameco's uranium market share. However, Plutonium's high radioactivity and potential for misuse lead to strict regulations and possible public opposition, and the development of FBR and MSR are still in the early stage with more exposure in Asia. Considering Cameco's small exposure in Asia (17% uranium & 5% of UF₆ sold to Asia in 2024), the impact of this Gen IV reactor development will be limited on Cameco.

4. Inconsistent operation and transparency in Inkai with Kazatomprom

In the Inkai project with Kazatomprom, inconsistent operations can lead to production inefficiencies and unexpected costs. Lack of transparency may cause misunderstandings and disputes between the partners. Both issues can undermine the project's performance and Cameco's returns.
